Abstract

Abstract of Module Task

Money makes the world go round, does it really?

Analyzing the data published by the United Nations makes us believe that this statement is true. It is no easy task to measure happiness as it is very subjective. Ultimately our goal in life and every humans desire is to live a happy and fulfilled life. But when do people feel the happiest? We analyzed surveys from 2015 to 2019

Switzerland

Switzerland has been in the top 10 in every year the report has been published, this comes as no surprise if we look at the attributes as we found out influence the happiness score the most. This is also confirmed by the "OECD better life index" - In terms of health, life expectancy at birth in Switzerland is 84 years, four years higher than the OECD average of 80 years. - The average household net-adjusted disposable income per capita is USD 37 466 a year, higher than the OECD average of USD 33 604 a year.
